

Shanghai Fengshen Refrigeration Controls Co., Ltd

Introduction:

P6W12S pressure controller is a control equipment which is specially designed for fire protection system. Its characteristic is: it not only has a fast working SPDT (single pole double throw) switch, but also can control the low pressure. It can send out the single in a fairly small pressure to make actuators stop working, it protects the pressure well.

Data:

Adjust range: 0~0.20 Mpa

Differential: 0.04~0.10 MPa

Max working pressure: 1.6MPa

Switch contact capacity: 220v A.C. 16A, 110V A.C. 24A

Medium: Non-corrosive gas, water and oil

Ambient temperature: -40~+65 °C

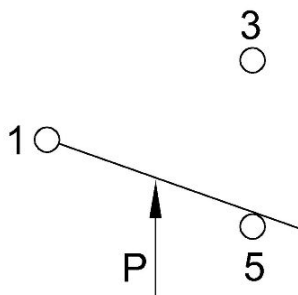

Medium temperature: -40~+120°C

Contact capacity: 220v A.C. 16A, 110V A.C. 24A

Contact form and function:

The switch contact form is SPDT

1--5 is normal closed

↑ the arrow indicates the direction of the rising pressure
